ALSCOTT BUILDING

office | boise, idaho

The Alscott building is a two-story glass and concrete structure which houses the Joe and Kathryn Albertson Foundation, Alscott Inc., and the family real estate business, located on the banks of the Boise River in the Park Center Business Complex. Visually unique from every angle the design features a natural rock waterfall flowing through the cavernous lobby to a riverside pool, dramatically bisected by a structural two-story glass curtain wall. This curved facade illuminates the interior while offering panoramic views of the Boise River and the foothills. The interior is finished with imported wood paneling, custom tile and ornate metalwork. This building includes state-of-the-art building management systems, security systems and teleconferencing facilities. The Alscott building won a Design Review award from the City of Boise in 2002 for its innovative design.
