ST. ALPHONSUS DIVERSIFIED CARE

healthcare | multiple locations

BRS Architects was asked to develop multiple prototypical neighborhood family care and minor emergency facilities that could be built in neighborhoods across the valley. The 9,500 square foot medical office buildings were constructed and later sold to doctors and operated as St. Alphonsus affiliate offices. The Selected sites were at the periphery of residentially zoned areas, this dictated that the exterior elevations would also reflect a residential character. Through the use of hipped and gabled roof planes clad with shingles, brick and EIFS veneers, and residential sized window openings the facilities blend well and buffer the transition into the neighborhoods from the major arterial's they are located upon. The facilities were designed to provide a broad range of medical services as well as house occupational therapy services, on-site drug screenings and an independent x-ray room with developing capabilities and other ancillary spaces.
