BRS Architects has proudly served Micron Technology at their Boise campus since 1990. In this time we have designed many types of facilities with the Micron Team, from production to recreation. The diverse tasks we have completed include new construction and remodel projects, over twenty-nine in all.

It has been a rewarding experience for BRS Architects to work with Micron Technology. We share a goal-oriented work ethic that rewards hard work, employing technology, and a team approach to problem solving. Our mutual success over two decades proves this is the best way to solve complex problems in a timely manner. BRS Architects welcomes the opportunity to join again with Micron Technology in building a better future.
